

MANAGEMENT'S DISCUSSION AND ANALYSIS
FOR THE THREE MONTHS ENDED MARCH 31, 2024 AND 2023

(Unaudited - expressed in Canadian dollars)

JAPAN GOLD CORP.
Management's Discussion and Analysis
For the periods ended March 31, 2024 and 2023

This Management's Discussion and Analysis ("MD&A"), prepared as of May 28, 2024, should be read in conjunction with the unaudited condensed consolidated interim financial statements of Japan Gold Corp. ("Japan Gold" or the "Company") for the period ended March 31, 2024 and the notes thereto, which have been prepared in accordance with IFRS Accounting Standards ("IFRS") as issued by the International Accounting Standards Board. All amounts are stated in Canadian dollars unless otherwise indicated.

Statements in this MD&A that are not historical facts are "forward-looking statements" that are subject to risk factors set out in a cautionary note contained herein. Readers are cautioned not to put undue reliance on forward-looking statements.

HIGHLIGHTS FOR THE PERIOD ENDED MARCH 31, 2024 AND THE SUBSEQUENT PERIOD

Barrick Alliance

- As at the date of this MD&A, the Company received total funding of \$17,103,352 (US\$12,999,177) since the commencement of the Barrick Alliance in February 2020 from Barrick Gold Corporation ("Barrick") for work to jointly explore, develop and mine certain gold mineral properties in Japan (the "Barrick Alliance").
- The **Mizobe Project** was the most active of the Barrick Alliance projects during 2023, with seven drill holes completed totaling 2,416 meters of drill core. Drilling has defined an extensive and largely concealed alteration system with significant mineralization encountered in drilling which includes up to 144 meters in down-hole length. The second round of drilling completed in Q4, 2023 further expanded the mineralized footprint and encountered banded quartz vein fragments demonstrating the dynamic nature of the hydrothermal system and vectoring towards deeper structure controlled targets.
- Mapping within the **Togi Project** under the Barrick Alliance confirmed the potential for concealed targets along a four-kilometre normal fault zone Northeast of the Mori vein workings. Eight line-kilometres of controlled-source audio frequency magnetotellurics ("CSAMT") geophysics were completed over the target in November 2023 highlighting resistivity and conductivity features interpreted as normal faults associated with low sulfidation systems. Subject to permitting, an initial two drill holes are planned for Q3, 2024 based on interpretation of the combined data set.
- Detailed mapping completed over the **Hakuryu Project** in Q4, 2023 under the Barrick Alliance has identified initial drill targets and four drill holes are planned for late 2024, pending permits. A drone magnetic survey will be completed June 2024 to further advance interpretation of multiple targets across the project.
- At the **Ebino Project**, immediately north of the Hishikari gold mine, geological mapping, soil sampling and ground magnetics are currently underway across multiple alteration zones to rapidly advance drill targeting.

Japan Gold Projects

- At the **Ikutahara Project**, 11-line kilometres of CSAMT were completed over a 1.4 by 1.2-kilometre open-ended gold and pathfinder element anomalous zone defined by soil sampling at the Showa and Ikutahara historical mines. The CSAMT data has identified thick resistive features below the anomalous soils, potentially indicating widespread silicification associated with a concealed vein system. This area is near drill ready and will be advanced for drilling based on permits and funding.
- Following the intersection of wide vein hosting structures in drilling at Saroma in 2022, the southwest strike extension of these structures was identified as prospective area for further exploration. 775 soil samples were collected along a 9-kilometre strike section of the structure identifying several gold and pathfinder anomalies and rock samples up to 54 g/t gold. The structural corridor remains open and future work programs will aim to further define and expand the system towards drill targeting.
- Detailed mapping completed over the **Bajo Project** has confirmed locally high-grade gold in rock samples associated with 8 separate vein structures across a four by three-kilometre zone on the west side of the project. Mapped quartz veins show a similar character to those from the Bajo mine located three-kilometre to the east, which produced more than 420 Koz of gold at an average grade of 41.7 g/t up to its closure in 1950. Importantly, the presence of granite basement outcrops adjacent to the mineralized veins provides a compelling case for a repetition of the high-grade Bajo mineralization on the west side of the project. The next steps include modelling gravity and/or ground magnetic data to support the targeting of gold-bearing structures at intersections with the top of the concealed granite.

JAPAN GOLD CORP.

Management's Discussion and Analysis

For the periods ended March 31, 2024 and 2023

Capital Raising Activities

- In April 2024, the Company closed a non-brokered private placement of unsecured convertible debentures (the "Debentures") for gross proceeds of US\$2,000,000 (CDN\$2,755,000) (the "Offering") to an existing strategic investor.
- The Debentures will mature on April 29, 2027, being the date that is three years from the date of issuance (the "Maturity Date"). The principal amount of the Debentures is convertible, at the election of the Company after the initial four month hold period prior to the Maturity Date, into common shares of the Company at a price of \$0.13 per common share. The Debentures bear interest from the date of issue until the Maturity Date or date of conversion at a rate of 10% per annum non-compounded and payable on the Maturity Date in common shares. Subject to TSX Venture Exchange ("TSXV") acceptance, any interest that has accrued in arrears on the principal amount outstanding under the Debentures will be payable in common shares at a price per share which equals the greater of the 'Market Price' (as that term is defined in the policies of the TSXV) or \$0.13 on the date the accrued interest becomes payable.
- In connection with the Offering, the Company will seek disinterested shareholder approval for the creation of a control person at the Company's next annual general meeting, which is expected to be held in October 2024. If such approval is received, the outstanding principal amount under the Debentures will automatically convert ten days after the approval into common shares at a price of \$0.13 per common share, and the greater of Market Price and \$0.13 per common share, in the case of the interest.

Leadership

- On March 1, 2024, the Company announced the appointment of Fraser MacCorquodale as President and Chief Operating Officer. Mr. MacCorquodale is a mining expert in a variety of gold and copper deposits built through exploring and assessing over 300 global projects. He has over 35 years of global gold and copper exploration experience, including leading Newcrest Mining's global exploration team from 2008 to 2023, which resulted in the discoveries of Golpu Deeps, (Papua New Guinea), East Ridge (Canada), Havieron (Australia), Toguraci Deeps (Indonesia), and Seguela (West Africa). Mr. MacCorquodale is skilled in strategy development and execution, development of growth pipelines, mergers and acquisitions and targeting, built on a deep technical knowledge of epithermal gold and porphyry copper-gold deposits. He has expertise in near-mine, brownfield, and greenfield exploration across different cultural and geographical settings, including Australia, Indonesia, Papua New Guinea, Canada, USA, Ecuador, Argentina, and Chile. Mr. MacCorquodale is a recipient of the Colin Spence Award for Excellence in Global Mineral Exploration from the Association for Mineral Exploration.

COMPANY OVERVIEW

Japan Gold Corp. (TSX-V: JG) (OTCQB: JGLDF) is a Canadian mineral exploration company focused solely on gold exploration across the three largest islands of Japan: Hokkaido, Honshu, and Kyushu. The Company holds a portfolio of 35 gold projects which cover areas with known gold occurrences, a history of mining, and are prospective for high-grade epithermal gold mineralization. The Company's leadership team represents decades of resource industry and business experience, and the Company has an operational team of geologists, drillers and technical advisors with experience exploring and operating in Japan.

On February 24, 2020, the Company announced an alliance with Barrick Gold Corporation ("Barrick"), referred to as our Barrick Alliance, to jointly explore, develop, and mine certain gold mineral properties and mining projects with the potential to host Tier 1 or Tier 2 gold ore bodies. Barrick sole funded a 30-month Initial Evaluation Phase on the majority of the Company project portfolio. Japan Gold acts as the Manager of each project, subject to Barrick's right at any time to become the Manager of a project. Barrick may identify a project as a Designated Project at any time during the Initial Evaluation Phase or the Second Evaluation Phase and elect to sole fund to completion of a pre-feasibility study ("PFS"). Upon completion of a PFS, Barrick will earn a 51% interest in the Designated Project. Barrick may elect to continue to sole fund a Designated Project following the completion of a PFS to a bankable feasibility study ("BFS"). Barrick's interest in the Designated Project at the completion of the BFS will increase to 75%. Where Barrick has elected to sole fund a Designated Project through to completion of a BFS, Japan Gold will be fully carried through completion of the BFS and retain a 25% interest in the Designated Project. On receipt of funds from Barrick, the Company records amounts received as restricted cash with an offsetting payable to Barrick. The payable to Barrick is decreased as qualifying expenditures are incurred.

On September 6, 2022, the Company announced that Barrick had selected six projects from the portfolio to continue within the Second Evaluation Phase (see detailed discussion of the Barrick Alliance below). In addition, Barrick will be continuing their Initial Evaluation Phase on two projects and three project extensions that were added to the Barrick Alliance following its

JAPAN GOLD CORP.
Management’s Discussion and Analysis
For the periods ended March 31, 2024 and 2023

formation. Barrick will continue to provide full support and management and sole fund all Barrick Alliance activities. Subsequent to March 31, 2024 and as at the date of this MD&A, Barrick has paid an additional \$848,517 (US\$626,813) to fund work programs. To date, Barrick has funded a total of \$17,103,352 (US\$12,999,177). Barrick has not yet declared any project as a Designated Project.

Japan is considered one of the most stable and corruption-free jurisdictions in the world. The mining regulatory framework is well established and transparent with appropriate access to government officials and a comprehensive support program to facilitate stakeholder consultation. The Company deliberately selected project areas in sparsely populated areas with a history of gold mining.

FINANCIAL SNAPSHOT

	March 31, 2024	December 31, 2023	December 31, 2022
Total assets	\$ 26,531,802	\$ 28,758,287	\$ 28,477,234
Working capital ⁽¹⁾	827,443	1,954,859	1,530,739
Net loss	(874,309)	(3,271,587)	(3,942,414)
Comprehensive loss	(2,963,897)	(5,361,175)	(4,808,386)
Loss per share	(0.00)	(0.01)	(0.02)

(1) Working capital is defined as current assets less current liabilities.

At the date of this MD&A, the Company has working capital of approximately \$2.45 million which includes \$148,000 in restricted cash representing amounts funded by Barrick in excess of amounts paid for exploration and evaluation expenditures.

PROPERTY REVIEW AND OUTLOOK

When the Japan Mining Act was amended in 2012 for the first time allowing foreign mineral companies the ability to hold exploration and mining permits, Japan Gold began reviewing Japan’s extensive geoscientific database and historical gold production data to pinpoint areas with good exploration potential and commenced building of its exploration portfolio with its first submission of prospecting rights applications in late 2014.

Having prospecting rights applications accepted by Ministry of Economy, Trade and Industry, (“METI”) reserves the land for Japan Gold and allows for active surface exploration programs such as mapping, surface sampling and geophysics. Granting of Prospecting Rights by the METI allows for more advanced forms of exploration, such as drilling. As of the date of this MD&A report the Company holds priority over 35 projects across the three main islands of Japan, for a total of 299,460 hectares. This encompasses a total of 977 prospecting rights license applications accepted by METI, of which 220 have been granted as prospecting rights licenses.

The following is a breakdown of the 220 current Prospecting Rights:

- 15 Prospecting Rights are granted at the Iktuhara Project (5,245 hectares), 23 rights expired in May 2023 and 18 of these applications were re-applied for and accepted by METI
- 11 Prospecting Rights at the Ohra-Takamine Project (3,705 hectares)
- 4 Prospecting Rights at the Tobaru Project (1,347 hectares)
- 12 Prospecting Rights at the Kamitsue Project (4,069 hectares)
- 9 Prospecting Rights at the Aibetsu Project (2,916 hectares)
- 14 Prospecting Rights at the Bajo Project (4,478 hectares)
- 4 Prospecting Rights at the Buho Project (1,325 hectares)
- 6 Prospecting Rights at the Usa Project (1,838 hectares)
- 47 Prospecting Rights at the Ebino Project (14,698 hectares)
- 22 Prospecting Rights at the Mizobe Project (5,163 hectares)
- 36 Prospecting Rights at the Tobaru-Fuke Project (10,599 hectares)
- 11 Prospecting Rights at the Onoyama Project (2,784 hectares)
- 29 Prospecting Rights at the Gumyo Project (7,822 hectares)

JAPAN GOLD CORP.
Management's Discussion and Analysis
For the periods ended March 31, 2024 and 2023

The following is a summary of work completed to date by the Company:

Ikutahara Project

The 21,332-hectare Ikutahara Project (which includes 5,245 hectares of prospecting rights and 16,086.8 hectares of prospecting rights application) is the Company's most advanced project. Located 20 kilometers southeast of the historic Konomai mine in north Hokkaido, the Ikutahara Project hosts 17 historic gold mines and workings including the Kitano-o mine (1924-43) which produced 96,450 ounces of gold from surficial eluvial placers associated with sinter deposits and sub-sinter epithermal veins.

The Ryuo Prospect located in the northwest of the Ikutahara project hosts five areas of historical workings along a 1 km open ended zone of alteration and mineralization. Drilling in 2021-22 encountered high-grade extensions below the historical Jinja workings including: 4.9 metres @ 12.1 g/t Au and 33 g/t Ag (IKDD21-001); and IKDD21-010: 20 m @ 6.3 g/t Au and 15.7 g/t Ag, including 5 metres @ 15.2 g/t Au and 13.1 g/t Ag (IKDD21-010). Additional high-grade intersections were encountered up to 750 metres further along strike including 0.45 metres @ 1,395 g/tAu and 768 g/t Ag (IKDD21-008) and 1.00 metre @ 30.0 g/t Au & 284.0 g/t Ag (IKDD21-007). The mineralization at Ryuo is hosted within an elongate ~1 kilometre long window of pre-mineral geology, and late or post-mineral rhyolite lava encloses and overlies potential strike extensions. Two phases of soil grids were completed in 2021 and 2022 to test for concealed extensions, this work identified areas of silicification and path-finder element anomalism in the northeast & southeast corners of the 4.5 by 3.5-kilometre grid area which remain open and require further follow up.

Important insights gained from the drilling at Ryuo to date include the identification of high-grade gold events across the prospect, wide high-grade mineralized vein structures, and the intimate relationship of certain rhyolite phases with mineralization. The down-plunge extension of the Jinja shoot along the rhyolite dome margin remains open and post-mineral faulting across the prospect has off-set of vein-zone extensions that require further modeling.

Upon completion of drilling at Ryuo in 2022 operations shifted to the east side of the Kitano-o prospect where three 700-metre-deep drill holes were completed to target the source of 96, 000 ounces of gold mined from the paleosurface sinter at Kitano-o. The initial scout drill holes at east Kitano-o targeted combined geochemical and geophysical anomalies below historic workings and adjacent to major graben and rhyolite dome structures proximal to the Cretaceous basement interface.

Drilling to date has not yielded a source for the significant amount of gold precipitated at the paleo-surface. With a more complete geochemical coverage from soil sampling, it is now interpreted that these gold-bearing paleo-surface expressions are de-coupled from structures hosting the boiling-zone vein systems developed at depth.

Between 2020 and 2022 composite soil samples were collected along a 7-kilometre-long section of a major deep-seated graben fault which bounds the east side of the Kitano-o gold district and localizes the majority of epithermal mineralization in the project. The presence of both sinter material at Kitano-o and of numerous areas of steam-heated clay alteration with coincident gold and path-finder elements indicate at least three fully preserved epithermal systems are developed at depth within the district.

A careful screening of the soil geochemical data combined with other data sets was required to define deeper boiling-zone targets. Three new target areas have been defined based on their supporting multi-element pathfinder signatures which are up to 1.5 kilometres in strike length and remain open off the soil grid. The two highest priority are located west of the Ikutahara-Showa mines and lie along linear strike extensions of known veins sets mapped at surface. A third more subtle anomalous zone, in the northern part of the district, lies along the southern edge of a large rhyolite dome, and is further supported by fine-grained chalcedonic vein and sinter float trains.

To further advance the Showa-Ikutahara mine strong gold and pathfinder element anomalies an 11-line kilometer CSAMT survey was completed over the prospects in Q4 2023. The CSAMT data identified thick resistive features below the anomalous soils, potentially indicating widespread silicification associated with a concealed vein system. This area is near drill ready and will be advanced based on permits and funding.

On December 14, 2022, the Company announced the completion of the drilling activities at the Saroma prospect, where six initial scout drill holes tested a 1-kilometre section of the Saroma vein. The Saroma vein is located at the northeast end of an open-ended 3.5-kilometre-long mineralized structure defined by the Saroma, Chitose and Taiho mine workings.

JAPAN GOLD CORP.

Management's Discussion and Analysis

For the periods ended March 31, 2024 and 2023

Multiple veins hosting high-grade silver, and gold mineralization were successfully intercepted in all six drill holes with vein widths up to 8 meters (true width). Quartz veining exhibits impressive chalcedony-rich low-sulphidation epithermal vein textures, indicating good preservation of the vein system and potential to depth and along strike.

Reconnaissance mapping along the Saroma structure at the Chitose and Taiho workings confirmed banded chalcedony vein outcrops up to 5 metres wide with broad silicification envelopes and surface and rock samples up to 10.85 grams per tonne gold. The historical Jomon workings located another 5 kilometres southwest of the Taiho workings lie on an inferred continuation of the Saroma structure. Reconnaissance mapping completed along the 9 kilometre long open-ended structure between Saroma and Jomon successfully identified areas of alteration and float of high-level vein material up to 54 g/t gold. A soil grid was commenced and geochemical results have identified several gold and pathfinder anomalies along the corridor which remain open-ended. Further work is now required to define and expand extensions towards drill targeting along this potentially significant vein hosting structure.

Other Projects

The Company completed a review of the projects not selected by Barrick for further work, but which exhibit strong exploration potential. Data sets for each project include historical data compilations, work completed by both the Company and by the Barrick Alliance, along with forward work program proposals for 2024. The Company continues to seek additional relationships to bring new concepts, exploration practices and foreign investment to Japan and advance the large Japan Gold project portfolio.

Barrick Alliance

On February 24, 2020, the Company announced an alliance with Barrick. Barrick sole funded a 30-month Initial Evaluation Phase on the majority of the Company project portfolio. Japan Gold acts as the Manager of each project, subject to Barrick's right at any time to become the Manager of a project. Barrick may identify a project as a Designated Project at any time during the Initial Evaluation Phase or the Second Evaluation Phase and elect to sole fund to completion of a pre-feasibility study ("PFS"). Upon completion of a PFS, Barrick will earn a 51% interest in the Designated Project. Barrick may elect to continue to sole fund a Designated Project following the completion of a PFS to a bankable feasibility study ("BFS"). Barrick's interest in the Designated Project at the completion of the BFS will increase to 75%. Where Barrick has elected to sole fund a Designated Project through to completion of a BFS, Japan Gold will be fully carried through completion of the BFS and retain a 25% interest in the Designated Project. On receipt of funds from Barrick, the Company records amounts received as restricted cash with an offsetting payable to Barrick. The payable to Barrick is decreased as qualifying expenditures are incurred.

On September 6, 2022, the Company announced that Barrick had selected six projects from the portfolio to continue within the Second Evaluation Phase (see detailed discussion of the Barrick Alliance below). In addition, Barrick will continue their Initial Evaluation Phase on two projects and three project extensions that were added to the Barrick Alliance following its formation. Barrick will continue to provide full support and management and sole fund all Barrick Alliance activities. To date, Barrick has funded a total of \$17,103,352 (US\$12,999,177). Barrick has not yet declared any project as a Designated Project.

Barrick's selection criteria require the potential to host either a Tier 1 or Tier 2 ore body to advance under the Barrick Alliance. Tier 1 ore bodies are defined by Barrick as having 5 million ounces or greater potential with annual production of at least 500,000 ounces of gold for 10 years and Tier 2 ore bodies are defined as having 3 million ounces or greater potential with annual production of 300,000 ounces of gold for ten years.

The following projects were chosen by Barrick following a comprehensive program of field and data review, completed by senior Barrick and the Company's personnel:

- Mizobe, Ebino, Aibetsu, Hakuryu, Togi and Tenyru, included in the Barrick Alliance at the time of its original formation, advanced to the program's Second Evaluation Phase.
- Buho Extension - Nakanosawa, Aibetsu East Extension, and Togi Extension were added to the Barrick Alliance following its formation and, as such, will continue under the Initial Evaluation Phase in accordance with the terms of the Alliance Agreement.

Following the announcement of Barrick's selection of six Japan Gold projects in September 2022, work programs immediately commenced on priority targets listed above.

JAPAN GOLD CORP.
Management's Discussion and Analysis
For the periods ended March 31, 2024 and 2023

Mizobe Project

The Mizobe Project is located in the Hokusatsu Region of Southern Kyushu in a similar geological setting to Sumitomo Metal Mining's Hishikari gold mine, located 23 kilometres to the north.

An Induced Polarization "IP" geophysical survey comprising 14.6-line kilometres was completed over the eastern part of the Mizobe Project in September 2022 aimed at mapping subsurface chargeability and resistivity features below a thin veneer of post-mineral volcanic ash, potentially representing buried mineralization and surrounding alteration haloes.

An initial three framework drill holes were commenced in February 2023 targeting interpreted structural extensions below post-mineral volcanic ash on large step-outs between 600 to 1,000 metres from known surface mineralization and historical drilling data. Drilling encountered the following significant mineralized interval from MZDD23-003:

144.0 m @ 0.7 g/t Au & 2.1 g/t Ag from 47.0 m;
including: 68.25 m @ 0.9 g/t Au & 2.1 g/t Ag and;
16.0 m @ 2.8 g/t Au & 4.5 g/t Ag;
and, 10.0 m @ 4.3 g/t Au & 6.6 g/t Ag.

A second round of drilling at Mizobe completed in Q4, 2023 comprised and additional four diamond holes on large, up to 500-meter step-outs around the long-mineralized intercept in MZDD23-003. All drill holes continued to encounter hydrothermal alteration with the best interval from drill hole MZDD23-004:

33.55 m @ 0.6 g/t Au & 3.1 g/t Ag from 28.3 m;
including: 12.0 m @ 1.0 g/t Au & 4.5 g/t Ag

Multiple alteration and mineralizing events are observed in the drill core including banded chalcedony-sulphide vein clasts, banded carbonate-quartz-sulphide veins, and hydrothermal brecciation which has provided a permeability pathway and host for a younger gold-sulphide mineralization event. Banded chalcedony is a quartz vein texture that may represent the upper parts of epithermal vein systems, fragments of this banded chalcedony now incorporated into a younger mineralized hydrothermal breccia provide a vector towards potential deeper structure-controlled vein-style mineralization not yet identified. Interpretation is currently underway to identify additional conceptual targets below the post-mineral ash cover.

Ebino Project

Induced Polarization surveying was completed in November 2022 at the Otsuka prospect located 12 kilometres north of the Hishikari mine. A total of 9.4-line kilometres were completed along a 4-kilometre-long alteration zone which overlies well-defined gravity anomalies. A decision to drill this prospect is pending results from programs currently underway across the rest of the Ebino project.

Several other significant alteration zones are located within the project including the Masaki, KZ and Aoki zones, distributed along the same or parallel structures to those that host the high-grade Hishikari and Okuchi gold mines. Work programs including geological mapping, soil sampling and ground magnetics are currently underway across the large ~15,000-hectare project to interpret the relationship of these alteration zones to potential deeper gold-bearing epithermal veins systems for drill targeting.

Aibetsu Project

The Aibetsu Project encompasses five historical gold-silver and mercury mines and/or mineral occurrences on the western side of the project, and large areas of alteration within the central and eastern parts of the project. The Tokusei mine produced 38,580 ounces of gold and 472,620 ounces of silver, mined from quartz-adularia veins between 1930-1942. The project area has had only limited exploration since the 1940's which included mapping, soil sampling, and resistivity surveys by MMAJ over the Tokusei mine area between 1998-2002. This work culminated in five diamond drill holes up to 700 metres deep for a total of 3,400 metres targeted mainly on Tokusei mine extensions. The most significant result was from drill hole 13MAHB-2 which reported an intersection of 1.4 metres at 69 grams per tonne gold and 263 grams per tonne silver from a quartz vein intersected approximately 340 metres below surface.

In the third and fourth quarter of 2022, the Alliance completed detailed mapping and outcrop sampling to define the source of highly elevated gold and pathfinder element anomalies identified from Initial Phase BLEG sampling over a contiguous 5 by 5-

JAPAN GOLD CORP.
Management's Discussion and Analysis
For the periods ended March 31, 2024 and 2023

kilometre zone within the eastern side of the project. Mapping defined two extensive clay alteration zones with associated quartz vein mineralization. By mid-September 2023, 4 lines for a total of 16.3 line kilometres of CSAMT had been completed across the alteration system along with and soil sampling along 6 broadly spaced grid lines. The terrain at Aibetsu comprised the most rugged, remote and difficult to access of any of the Company's projects with elevations up to 1,200 metres.

The combined data set has defined a 3 by 8 kilometre NE oriented structural corridor with anomalous pathfinder elements, alteration and local quartz veining. The most promising target is located in the NE ridge area and a drill target has been proposed for further consideration.

Hakuryu Project

Detailed mapping completed over the project in Q4 2024 has identified initial drill targets and four drill holes are planned for late 2024, pending permits. A drone magnetic survey will be completed June 2024 to further advance interpretation of multiple targets across the project. The Hakuryu Project is located at the southern end of the 18-kilometre-long Konomai gold field. The northern and central parts of the Konomai vein field were developed and mined by Sumitomo Metal Mining Co., Ltd. ("SMM") between 1915-1973 producing 2.35 Moz of gold at an average grade of 6.4 g/t¹. Most of the veins exploited by SMM were exposed at or near boiling zone levels, the most notable vein from the Konomai vein field is the Konomai No. 5 vein which produced 1.17 Moz of gold from a 2-kilometre-long vein that was up to 50 metres wide and 560 metres deep¹.

Togi Project

In Q2 2023, mapping was completed at the Togi Project confirming the potential for concealed targets along a four-kilometre normal fault zone NE of the Mori vein workings. Eight line-kilometers of CSAMT geophysics completed over the target in November have highlighted resistivity and conductivity features interpreted as normal faults associated with the low sulfidation systems emplacement. An initial two drill holes are planned for Q3, 2024 based on interpretation of the combined data set.

On January 1, 2024, Japan experienced an earthquake, measuring 7.6 magnitude, on the Noto Peninsula in Ishikawa Prefecture, the location of the Togi Project. As the epicenter was very shallow, large tremors were observed in many places with property damage, loss of life and a tsunami warning. A potential drill program in 2024 is subject to the ability to access areas affected by the earthquake along with pending results and permitting.

SUMMARY OF QUARTERLY RESULTS

	March 31, 2024	December 31, 2023	September 30, 2023	June 30, 2023
Total assets	\$26,531,802	\$28,758,287	\$28,784,272	\$29,880,574
Working capital	827,443	1,954,859	3,101,908	4,539,420
Net loss	(874,309)	(768,401)	(679,350)	(818,399)
Basic and diluted loss per share	(0.00)	(0.00)	(0.00)	(0.00)

	March 31, 2023	December 31, 2022	September 30, 2022	June 30, 2022
Total assets	\$27,213,745	\$28,477,234	\$27,188,892	\$28,827,823
Working capital	101,349	1,530,739	4,254,416	7,212,067
Net loss	(1,005,437)	(932,061)	(789,807)	(1,148,890)
Basic and diluted loss per share	(0.01)	(0.00)	(0.00)	(0.01)

Total assets decreased from \$27,213,745 at March 31, 2023, to \$26,531,802 in March 31, 2024. This is attributed to a decrease in cash used in operating expenditures during the year and foreign currency translation adjustments when converting the assets

JAPAN GOLD CORP.

Management's Discussion and Analysis

For the periods ended March 31, 2024 and 2023

of the Company's Japanese subsidiaries to Canadian dollars. The Company continues to explore and capitalize exploration and evaluation expenditures related to the Company's exploration and drilling programs. As at March 31, 2024, the Company has capitalized a total of \$25,032,103 in exploration and evaluation assets.

RESULTS OF OPERATIONS FOR THE THREE MONTHS ENDED MARCH 31, 2024

During the three-month period ended March 31, 2024, the Company incurred a net loss of \$874,309 compared to a net loss of \$1,005,437 for the three-month period ended March 31, 2023. Significant changes occurred in the following categories:

- The Company recorded lower professional fees of \$74,041 and lower investor relations expense of \$191,347 due to a reduction of costs and less corporate activities in the period (March 31, 2023 – \$97,192 professional fees and \$205,426 investor relations).
- The Company recorded lower travel expense of \$39,403 (March 31, 2022 - \$77,916) due to a reduction of costs and less corporate and investor relations activities.
- The Company recognized project evaluation costs of \$163,996 (March 31, 2023 - \$190,940) on activities related to the projects returned from the Barrick Alliance.

LIQUIDITY AND CAPITAL RESOURCES

The Company's cash and cash equivalents as at March 31, 2024, were \$484,593 which was a decrease from \$1,968,831 as at December 31, 2023. As at March 31, 2024, the Company has a working capital of \$827,443 compared to a working capital of \$1,954,859 as at December 31, 2023.

Net cash used in operating activities for the period ended March 31, 2024, was \$1,197,047 compared to net cash used of \$1,025,096 during the period ended March 31, 2023. The cash used in operating activities reflected the Company's efforts in continuing to build and assess its project portfolio during the period.

Net cash used in investing activities during the period ended March 31, 2024, was \$206,849 (March 31, 2023: \$873,486). The lower net cash used in investing activities is due to the Company's focus on Alliance projects in 2024 (which are funded by Barrick) compared to 2023 where exploration and drilling programs were incurred to advance the Company's key projects in Ikutahara and Ohra-Takamine along with evaluating other projects within the portfolio.

Net cash from financing activities during the period ended March 31, 2024 was \$Nil (March 31, 2023: \$190,000 due to the exercise of options).

These condensed consolidated interim financial statements have been prepared on the basis of accounting principles applicable to a "going concern", which assumes that the Company will continue its operations for the foreseeable future and will be able to realize its assets and discharge its liabilities in the normal course of operations as they become due. The Company has not generated any revenues or cash flows from operations to date. For the period ended March 31, 2024, the Company incurred negative cash flows from operations of \$1,197,047 and recorded a net loss of \$874,309. The Company's ability to continue as a going concern is dependent on its ability to successfully raise additional financing, entering into a joint venture, sale of all or a portion of the Company's assets, the outright sale of the Company, the successful development of the Company's mineral property interests, or a combination thereof. The Company believes that it will be able to continue as a going concern for the foreseeable future based on the Company's historical and anticipated ability to raise additional financing to further advance its projects. However, the Company will continue to incur negative cash flows from operations and the Company will require additional funding in the future. Although the Company has been successful in the past in obtaining financing, there is no assurance that it will be able to obtain adequate financing in the future or that such financing will be on terms acceptable to the Company. These factors indicate the existence of a material uncertainty that may cast significant doubt upon the Company's ability to continue as a going concern. These consolidated financial statements do not give effect to any adjustments that would be necessary to the carrying values and classification of assets and liabilities should the Company be unable to continue as a going concern. Such adjustments could be material.

RELATED PARTY TRANSACTIONS

Key management and personnel compensation

Key management personnel include the officers and directors of the Company. Key management compensation and amounts paid to companies controlled by key management consists of the following:

JAPAN GOLD CORP.
Management's Discussion and Analysis
For the periods ended March 31, 2024 and 2023

	Period ended		Period ended	
	March 31, 2024		March 31, 2023	
Management fees*	\$	117,000	\$	117,000
Project evaluation-consulting	\$	37,626	\$	60,967
Consulting fees*	\$	64,062	\$	73,826
Director fees	\$	38,683	\$	38,638

* Prior year comparatives for management fees and consulting fees have been re-presented for the reclassification of non-management fees of \$51,000 to consulting fees.

During the period ended March 31, 2024, the Company incurred \$117,000 (March 31, 2023: \$117,000) in management fees and \$51,000 (March 31, 2023: \$51,000) in consulting fees for administrative, finance and accounting services to a private company controlled by John Proust, the Chief Executive Officer of the Company. The Company also reimbursed such private company \$22,050 in occupancy costs during the period ended March 31, 2024 (March 31, 2023: \$19,200).

The Company incurred \$37,626 in consulting fees for project evaluation to Andrew Rowe, an officer of the Company during the period ended March 31, 2024 (March 31, 2023: \$60,967). As at March 31, 2024, \$11,447 (December 31, 2023: \$8,454) of these fees were outstanding and payable to the officer.

The Company paid \$13,062 in consulting fees (March 31, 2023: \$22,826) to Takashi Kuriyama, General Manager of Exploration of the Company.

Other related party transactions

During the period ended March 31, 2024, Southern Arc, a company with common directors and management, charged the Company \$Nil in office expenses (March 31, 2023: \$6,446).

The above transactions occurred in the normal course of operations and are recorded at the consideration established and agreed to by the related parties.

CURRENT SHARE DATA

As at the date of this MD&A, the Company had 256,515,479 common shares issued and outstanding.

The following table summarizes information about the share options outstanding as at the date of this MD&A:

Outstanding	Weighted average exercise price	Expiry date	Weighted average remaining life (years)
120,000 \$	0.27	June 3, 2024	0.02
3,024,950	0.40	September 15, 2026	2.30
275,000	0.40	October 28, 2026	2.42
1,250,050	0.16	December 13, 2028	4.55
4,110,000	0.20	January 24, 2029	4.66
3,815,000	0.30	May 13, 2030	5.96
5,915,000	0.35	December 23, 2026	2.57
100,000	0.20	July 4, 2028	4.10

1,200,000	0.20	April 10, 2029	4.87
200,000	0.20	May 20, 2029	4.98
20,210,000 \$	0.29		4.20

As at the date of this MD&A, 18,726,667 of the options outstanding are exercisable.

JAPAN GOLD CORP.
Management's Discussion and Analysis
For the periods ended March 31, 2024 and 2023

As at the date of this MD&A, 1,561,682 restricted share units are outstanding with an exercisable price of \$0.20 per share with an expiry date of April 11, 2025. As at the date of this MD&A, none of the restricted share units are exercisable.

As at the date of this MD&A, the US\$2,000,000 (CDN\$2,755,000) principal amount of the Debentures is convertible, at the election of the Company after the initial four month hold period prior to April 29, 2027, into common shares of the Company at a price of \$0.13 per common share.

As at the date of this MD&A, the Company has no warrants outstanding.

RISKS AND UNCERTAINTIES

The Company's business could be significantly adversely affected by certain external risks that could adversely affect the economies and financial markets of many countries, resulting in an economic downturn that could affect the Company's products and likely impact operating results. These factors may impact the Company's ability to obtain financing or third parties' ability to meet their obligations with the Company.

The nature of the Company's operations exposes the Company to liquidity risk, credit risk and market risk, which may have a material effect on cash flows, operations and comprehensive income.

The Company's risk management policies are established to identify and analyse the risks faced by the Company, to set appropriate risk limits and to monitor market conditions and the Company's activities. The Board of Directors has overall responsibility for the establishment and oversight of the Company's risk management framework and policies.

Liquidity risk is the risk that the Company is not able to meet its financial obligations as they fall due. The Company ensures that there is sufficient capital in order to meet short term business requirements after taking into account the Company's cash and cash equivalents. All of the Company's financial liabilities, are classified as current. The Company's approach to managing liquidity risk is to ensure as far as possible that it will have sufficient liquidity to meet liabilities when due.

Credit risk - Financial instruments that potentially subject the Company to credit risk consist of cash and cash equivalents, restricted cash, deposits and accounts receivable. The Company limits its credit exposure on cash and cash equivalents and restricted cash by holding its deposits mainly with high credit quality financial institutions as determined by credit agencies. The carrying value of these financial assets represents the maximum exposure to credit risk. The Company has no history of credit loss and no allowance for credit loss recorded at March 31, 2024 and December 31, 2023.

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates, and commodity and equity prices. The Company is currently exposed to interest rate risk to the extent that the cash and short-term investment maintained at the financial institutions are subject to a floating rate of interest. The interest rate risk on the Company's cash and short-term investment is not significant.

The Company operates in Japan and is subject to foreign currency fluctuations primarily on its cash and accounts payable and accrued liabilities denominated in a currency other than Japanese yen ("Yen or ¥"). As at March 31, 2024, this exposure is minimal. Additionally, the Company is exposed to foreign exchange risk on non-Canadian denominated monetary assets and liabilities recorded in Japan Gold. As at March 31, 2024, every 1% of change in foreign exchange rate in either direction would result in change in net loss of approximately \$1,800.

Fair value

IFRS requires disclosure about fair value measurements for financial instruments and liquidity risk using a three-level hierarchy that reflects the significance of the inputs used in making the fair value measurements. The three-level hierarchy is as follows:

- Level 1 - Unadjusted quoted prices in active markets for identical assets or liabilities;
- Level 2 - Inputs other than quoted prices that are observable for the asset or liability either directly or indirectly; and
- Level 3 - Inputs that are not based on observable market data.

The carrying values of the Company's cash and cash equivalents, restricted cash, accounts receivables, deposits and accounts payable and accrued liabilities approximate their fair values due to their short terms to maturity.

JAPAN GOLD CORP.
Management's Discussion and Analysis
For the periods ended March 31, 2024 and 2023

Other risk factors

Industry

The Company is engaged in the acquisition and exploration of resource properties, an inherently risky business, and there is no assurance that an economic mineral deposit will ever be discovered and subsequently advanced to production. Most exploration projects do not result in the discovery of economically mineable deposits. The focus of the Company is on areas in which the geological setting is well understood by management.

Gold and other metal prices

The price of gold is affected by numerous factors beyond the control of the Company including central bank sales, producer hedging activities, the relative exchange rate of the US\$ with other major currencies, demand, political and economic conditions and production levels. In addition, the price of gold has been volatile over short periods of time due to speculative activities. The prices of other metals and mineral products for which the Company may explore all have the same or similar price risk factors.

Permitting risk

The Company operates under the Mining Act (established in 1950) as amended in 2011 (implemented in 2012). Under the Mining Act, the Company has applied for prospecting rights which once granted, are valid for a maximum of 6 years. When prospecting rights applications are made and accepted for filing by the Ministry of Economy, Trade and Industry (METI) but prior to granting (the reservation period), the applicant has the exclusive opportunity to do early-stage exploration work including mapping, geology, geochemistry and geophysics but not trenching or drilling. There is no fixed timetable for the reservation period. Once granted, the prospecting rights may be converted to digging rights (mining rights). If not converted or in the process of being converted, prospecting rights will expire at the end of a 6-year period. There is no guarantee that the Company will be able to satisfy the requirements to convert its prospecting rights to digging rights within the defined 6-year time frame. The Company may reapply for expired prospecting rights on the same basis as new applicants but would not have any priority when doing so. Prospecting rights applications are processed on a "first to file" basis unless applications are submitted by multiple parties at the same time in which case applications will be subject to a lottery. The Company retains priority over new third-party prospecting rights applicants by submitting applications to convert its existing prospecting rights to digging rights prior to the expiry of the granted prospecting rights. This priority right remains in place until the digging rights are granted, or the application is rejected. The Company's project portfolio currently has 977 prospecting right applications accepted by METI. Of the 977 prospecting rights applications, 220 prospecting rights have been granted, in several batches, on 13 projects, enabling advanced exploration including drilling. The currently granted prospecting rights expire from 2024 through 2030. The Company work programs and budgets are designed to advance exploration on prospecting rights to prepare for potential conversion to digging rights.

Overall, the Company's mineral exploration activities are subject to receiving and maintaining licenses, permits and approvals from appropriate governmental authorities in Japan. The Company may be unable to obtain on a timely basis or maintain in the future all necessary permits to explore and develop its properties. Delays may occur in connection with obtaining necessary renewals or permits for the Company's existing operations and activities, additional permits for existing or future operations or activities, or additional permits associated with new legislation.

Ability to raise funding

The Company has no revenues from operations and expects to incur operating losses in future periods due to expenses associated with advancing its mineral projects, seeking new business opportunities and working capital costs. The Company has finite financial resources and its ability to advance its mineral projects will depend significantly upon its ability to secure near and long-term financing. There are no assurances that any financing alternative will be successful or that financing will be available at all or acceptable terms. These financing requirements will result in dilution of existing shareholders and the inability to obtain such financing may result in delay or postponement of the Company's activities.

JAPAN GOLD CORP.
Management's Discussion and Analysis
For the periods ended March 31, 2024 and 2023

Geopolitical risk

The Company recognizes the inherent uncertainties associated with geopolitical risks. Events such as trade disputes, changes in government policies, and regional conflicts may adversely impact various sectors of the economy, including but not limited to, financials, energy, metals and mining. These risks may result in disruptions to supply chains, fluctuations in currency exchange rates, and changes in demand for the Company's products and operations. As a result, the Company's business, financial condition, and results of operations may be negatively affected by economic and other consequences from geopolitical developments.

Climate change risk

The Company acknowledges the importance of addressing climate change risks. Environmental concerns, regulatory changes, and shifting consumer preferences toward sustainability could impact the Company's operations and business. Physical climate change risks such as extreme weather events and transition risks related to regulatory shifts and market preferences are considerations. The Company is committed to evaluating and managing our environmental footprint, pursuing sustainable practices, exploring innovative technologies to minimize environmental impact and staying informed about evolving climate-related regulations.

Global economic conditions

The unprecedented events in global financial markets in the past several years have impacted the global economy where many industries, including the mining industry, are impacted by these market conditions. Market events and conditions, including disruptions in the international credit markets and other financial systems could impede the Company's access to capital or increase the cost of capital which may adversely affect the Company's operations.

MATERIAL ACCOUNTING POLICIES

Reference should be made to the Company's material accounting policy information contained in Note 2 of the Company's consolidated financial statements as at December 31, 2023. These accounting policies can have a significant impact on the financial performance and financial position of the Company.

Significant accounting judgments and estimates

The preparation of the consolidated financial statements requires management to make certain estimates, judgments and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and reported amounts of expenses during the reporting period. Actual outcomes could differ from these estimates. The financial statements include estimates that, by their nature, are uncertain. Revisions to accounting estimates are recognized in the period in which the estimate is revised and future periods if the revision affects both current and future periods. These estimates are based on historical experience, current and future conditions and other factors, including expectations of future events that are believed to be reasonable under the current circumstances.

Estimation of uncertainty

Significant assumptions about the future and other sources of estimation uncertainty that management has made at the end of the reporting period, which could result in a material adjustment to the carrying amounts of assets and liabilities in the event that actual results differ from assumptions made, relate to, but are not limited to, the following:

- i) The application of the Company's accounting policy for exploration and evaluation expenditure and impairment indicator evaluation requires estimates in determining whether it is likely that future economic benefits will flow to the Company, which may be based on assumptions about future events or circumstances. Estimates and assumptions made may change if new information becomes available. If, after an expenditure is capitalized, information becomes available suggesting that the recovery of the expenditure is unlikely, the amount capitalized is written off in profit or loss in the year the new information becomes available. Ownership of exploration and evaluation assets involves certain inherent risks, including geological, commodity prices, operating costs and permitting risks. Many of these risks are outside of the Company's control.

JAPAN GOLD CORP.

Management's Discussion and Analysis

For the periods ended March 31, 2024 and 2023

For the period ended March 31, 2024 and December 31, 2023, there were no indicators of impairment identified with respect to the Company's exploration and evaluation assets.

- ii) The determination of fair value of share-based compensation associated with stock options and finders' fee warrants require assumptions with respect to volatility, expected life and discount rates. Changes in these assumptions impact the share-based compensation recognized in profit or loss over the vesting period of the stock options.

Judgments

Critical accounting judgments are accounting policies that have been identified as being complex or involving subjective judgments or assessments.

- i) The Company's assessment of its ability to continue as a going concern requires significant judgments about whether there are material uncertainties that may cast significant doubt about the Company's ability to continue as a going concern. The Company must determine whether sufficient financing will be obtained in the near term. See note 1 to the consolidated financial statements.

- ii) Recoverability of exploration and evaluation assets

The application of the Company's accounting policy for exploration and evaluation assets and expenditures requires judgment to determine whether future economic benefits are likely, from either future exploitation or sale, or whether activities have not reached a stage that permits a reasonable assessment of the existence of reserves.

At the end of each reporting period, the Company assesses its exploration and evaluation assets to determine whether any indication of impairment exists. Judgment is required in determining whether indicators of impairment exist, including factors such as the period for which the Company has the right to explore, expected renewals of exploration rights, whether substantive expenditure on further exploration and evaluation of exploration projects are budgeted and results of exploration and evaluation activities on the exploration and evaluation assets.

- iii) The determination of the functional currency of the Company and of its subsidiary requires significant judgment of the primary economic environment in which the Company and its subsidiary operates may not be clear. This can have a significant impact on the consolidated results of the Company based on the foreign currency translation method.

LIMITATIONS OF CONTROLS AND PROCEDURES

The Company's management, including the Chief Executive Officer and the Chief Financial Officer, believe that any disclosure controls and procedures or internal controls over financial reporting, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Due to the inherent limitations in all control systems, the Company's management cannot provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been prevented or detected. These inherent limitations include the fact that judgements in decision-making can be faulty and that breakdowns can occur because of a simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, through collusion of two or more people, or by unauthorized override of the control. The design of any control system is also based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Accordingly, because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected. The Company's officers are not required to certify the design and evaluation of the Company's disclosure controls and procedures and internal controls over financial reporting and have not completed such an evaluation. Inherent limitations on the ability of the certifying officers to design and implement on a cost-effective basis disclosure controls and procedures and internal controls over financial reporting for the Company may result in additional risks to the quality, reliability, transparency and timeliness of interim and annual filings and other reports provided under securities legislation.

QUALIFIED PERSON AND QUALITY CONTROL AND ASSURANCE

The technical information in this document has been reviewed by Andrew Rowe, Vice President of Exploration, BAppSc, FAusIMM, FSEG, who has sufficient experience relevant to the style of mineralization under consideration and qualifies as a Qualified Person as defined by National Instrument 43-101 Standards of Disclosure for Mineral Projects.

CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

Certain of the statements made and information contained herein is "forward-looking information" within the meaning of the British Columbia Securities Act. These statements relate to future events or the Company's future performance. All statements, other than statements of historical fact, may be forward-looking statements. Generally, these forward-looking statements can be identified by the use of forward-looking terminology such as "anticipates", "plans", "budget", "scheduled", "continue", "estimates", "forecasts", "expect", "is expected", "project", "propose", "potential", "targeting", "intends", "believes" or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might", or "will be taken", "occur" or "be achieved" or the negative connotation thereof. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. The Company believes that the expectations reflected in those forward-looking statements are reasonable, but no assurance can be given that these expectations will prove to be correct and such forward-looking statements included in this MD&A should not be unduly relied upon by readers, as actual results may vary. These statements speak only as of the date of this MD&A and are expressly qualified, in their entirety, by this cautionary statement. In particular, this MD&A contains forward-looking statements, pertaining to the following: capital expenditure programs, development of resources, treatment under governmental and taxation regimes, expectations regarding the Company's ability to raise capital, expenditures to be made by the Company and its joint venture partners on its properties and work plans to be conducted.

With respect to forward-looking statements listed above and contained in the MD&A, the Company has made assumptions regarding, among other things:

- *uncertainties relating to receiving mining, exploration and other permits in Japan;*
- *unknown impact related to potential business disruptions stemming from infectious disease outbreak, or geopolitical conflicts;*
- *unpredictable changes to the market prices for gold, copper and other commodities;*
- *exploration and developments costs for properties in Japan;*
- *availability of additional financing and farm-in or joint-venture partners;*
- *anticipated results of exploration and development activities;*
- *the Company's ability to obtain additional financing on satisfactory terms or at all.*

The Company's actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this MD&A: volatility in the market price for minerals; uncertainties associated with estimating resources; geological, technical, drilling and processing problems; liabilities and risks, including environmental liabilities and risks, inherent in mineral and oil and gas operations; fluctuations in currencies and interest rates; incorrect assessments of the value of acquisitions; unanticipated results of exploration activities; competition for, amongst other things, capital, undeveloped lands and skilled personnel; lack of availability of additional financing and farm-in or joint venture partners and unpredictable weather conditions. Although the Company has attempted to identify important factors that could cause results to differ materially from those contained in forward-looking statements, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. Readers are cautioned that the foregoing lists of factors are not exhaustive. Forward looking statements are made as of the date hereof and accordingly are subject to change after such date. The forward-looking statements contained in this MD&A are expressly qualified by this cautionary statement. The Company does not undertake to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except in accordance with applicable securities laws.
